PERSONAL INFO

Gender : Female

Nationality : Myanmar

Internship Availability

January 2027 – April 2027

LANGUAGE PROFICIENCY

English (Fluent)

Burmese (Native)

Chinese (HSK 3)

Thai (Basic)

OTHER CERTIFICATES

- ✓ HCCDA-Tech Essential
- ✓ HCCDA-Cloud Native
- ✓ HCCDA-AI
- ✓ HCIA-IoT

OBJECTIVE

Final-year Digital and Communication Engineering student at Mae Fah Luang University with hands-on experience in IoT, embedded systems, sensors, hardware-software integration, and software development. Experienced in developing projects using ESP32, Arduino, MQTT, Python, Flutter, and Figma. Currently developing a Smart Home Automation System that integrates an ESP32-based IoT system with a mobile application for device control, sensor monitoring, security, and automation. Strong interest in electronics, IoT, system engineering, and technology development, with good problem-solving and troubleshooting skills.

EDUCATION

Digital and Communication Engineering
Mae Fah Luang University, Thailand

TECHNICAL SKILLS

Programming: C/C++, Python, Dart, Basic C#

Embedded & IoT: ESP32, Arduino, Sensors, Actuators, MQTT, Embedded Systems

Software Development: Flutter, Web Development, Figma, REST API Fundamentals

Database & Data:

SQL Fundamentals, InfluxDB

Embedded & Hardware: ESP32, Arduino, Sensors, Actuators, Microcontrollers

Tools & Technologies: Arduino IDE, Node-RED, Docker, Grafana, MATLAB, Unity, Git/GitHub

TECHNICAL STRENGTHS

- Embedded C/C++ Programming
- Microcontroller-Based System Design
- Sensor Data Acquisition and Processing
- Hardware-Software Integration
- Basic IoT System Architecture
- Troubleshooting and Debugging

University Projects

IoT Data Monitoring & Visualization

Python, MQTT, Node-RED, InfluxDB, Grafana

- Built an IoT system for real-time sensor data collection, processing, and monitoring.
- Developed automation workflows with Python, MQTT, and Node-RED and created Grafana dashboards.

Smart Home Automation System — Senior Project I & II

ESP32, IoT, Sensors, Automation

- Developed an ESP32-based embedded automation system integrating sensors and actuators.
- Implemented automatic/manual control logic and performed system testing, troubleshooting, and debugging.

IoT Air Purification System

ESP32, IoT, Sensors, Cloud

- Developed an IoT environmental monitoring system with real-time sensor data and automated control.
- Performed hardware/software integration, testing, and system monitoring.

AR/VR Historical Experience

Unity, C#

- Developed and tested an interactive AR/VR application using Unity and C#.
